PROFILE

I am a student currently working through my L2 BTEC at Derby College, I am familiar with back-end web development with PHP and MySQL, having created multiple stable projects, which many involved learning reverse engineering so I could understand the software I was working with better. I'm looking to move into a role where I can further advance my knowledge on these subjects and get involved in more challenging tasks.

EDUCATION

Derby College – Joseph Wright Centre

L2 BTEC First Certificate in Information and Creative Technology – 2025/2026

U1: The Online World – L2 Pass

U2: Technology Systems – Merit

U3: A Digital Portfolio – Pending

U10: Database Development – Merit

U12: Software Development – Pending

U20: Building a Personal Computer – Pending

L1 Diploma in Esports, ICT & Games Development – 2023/2024

Overall Grade: Merit

The Long Eaton School

Information Technologies Camb National Certificate – 2022/2023

Overall Grade: Merit

KEY SKILLS OR RELEVANT SKILLS

O Hardware Knowledge – In my spare time over multiple years I have self-taught how to build, repair, and maintain multiple kinds of systems, examples of mine being replacing a broken hard drive in a laptop, repairing a faulty Wii DVD drive, or full teardowns to reapply thermal pastes.

O Database Development – In both college and in my own time, I have learnt how to create and manage databases in both Access and MySQL. At college for my assessment, I created an effective and easy to use database that would be used in a doctors surgery, in my own projects I

created my own databases for my websites to store a variety of user data and user generated content.

O Independent Working – In many of my past assignments and personal projects I have worked and learned independently, which has made well acquainted with many types of software and skills, such as PHP which I have used to create multiple types of websites on my own.

O Problem Solving – Linking into my independent working, I can solve/mitigate multiple types of problems under difficult constraints in multiple technical systems, as I look at all potential methods I could use to solve them, an example of using my problem solving skills I was able to find a way to communicate over modern TLS protocols on a legacy device that never supported them natively, while having little access to lower level networking APIs.

INTERESTS

I take deep interest in modding and reverse engineering old systems and software, my main interest in that area is seeing how far I can push the old BlackBerry phones, with my main goal of getting the online services working on them once again, which requires me to learn more about reverse engineering and my software development skills, this modding interest also spans into software, where I had modified legacy Roblox player clients (circa 2016) to point to my own domains, which with effort on reconstructing API's made them work again,
